Intro – The Prototype - “HoloCampus 是一个去中心化、去边界的知识宇宙，任何被现实压抑或忽视的学习，都能在这里实现。”
Introduction
HoloCampus imagines an open universe of learning where knowledge is no longer constrained by access, taboo, or time. Designed as a diegetic prototype in David Kirby’s sense, it exists fully within its fictional world, allowing audiences to see how immersive education might function rather than hearing it explained. The system decentralizes learning: students from any background can enter shared virtual classrooms to study life, empathy, or history through embodied, ethically guided experiences. By merging mixed-reality environments with humanistic values, HoloCampus challenges traditional boundaries between disciplines, institutions, and cultures. Its core meaning lies in rethinking education as a collective, inclusive, and morally aware process—one that treats information not as static data but as a living, participatory relationship between technology and humanity.

1. 灵感来源 (Inspiration) Vicki

说明这个设计的灵感从哪里来，比如古罗马建筑史、传统解剖实验、全球课堂讨论的现实困境等。
HoloCampus reimagines learning beyond the screen by restoring embodiment, ethics, and empathy. Inspired by Roman amphitheaters—spaces for collective experience—it transforms classes into immersive encounters: students walk inside the Colosseum to study structure, explore virtual anatomy without harm, and learn intimacy through safe, destigmatized simulations. By merging ancient spatial forms with mixed-reality design, HoloCampus envisions education as both sensory and ethical—a post-digital return to learning as shared human presence.

2. 外观与特征 (Features) ED

具体描述虚拟课堂里能做什么，比如沉浸体验、触觉反馈、分层显隐、跨语言翻译等。
The HoloCampus features hologlasses and an ear bone conduction sensor, creating an immersive mixed-reality classroom experience. Students can interact with materials through gestures, touch, voice, while receiving haptic feedback. A layered visibility system ensures materials, objects, or structures to appear, fade, put away, or move freely under student control. A floating HUD layer displays tasks, timer, notes, peer activities, and instructor feedback. Features such as auto-captioning or real-time translation further enable students from language backgrounds to interact and collaborate.

3. 目标用户 (Target Users) Zach

HoloCampus serves a diverse range of learners who seek inclusive, embodied, open-minded and respectful education. Students from diverse nations, languages, and economic backgrounds can enter the same virtual classroom. To be specific, whether children in a slum, students trapped by war, or adults eager to learn but with nowhere to study, it redistributes knowledge beyond privilege and geography. Reflecting Kirby’s idea of diegetic prototypes, HoloCampus turns speculative learning into a believable social necessity that unites ethics, emotion, and technology (Kirby 44).

Kirby, David. “*The Future Is Now: Diegetic Prototypes and the Role of Popular Films in Generating Real-World Technological Development*.” *Social Studies of Science*, vol. 40, no. 1, 2010, pp. 41–70.

4. 用途 (functions / Applications) Sincy Liu

说明在教学中怎么用，比如帮助学生理解历史结构、提供伦理安全的生物实验、促进跨文化交流。

Functions

In its diegetic universe, HoloCampus also serves as an experiential, mixed-reality learning platform that turns information into lived experience. Students don't merely receive content but live in it. The site combines sensory feedback, spatial reconstruction, and ethical interaction tool integration to enable users to touch, pause, and reinterpret knowledge across disciplines. The courses are decentralized and adaptive: history, anatomy, and sex education coexist side by side, institutionally unfenced, in a given virtual space. Teachers moderate its participation through real-time moderation and controls for privacy. By incorporating its operations naturally into its scenario of fiction, HoloCampus shows how technology might render learning experiential, inclusive, and ethically sustainable.

5. 潜在影响 (Implications) Ian

展望它可能带来的影响，比如 embodied learning、减少动物牺牲、推动全球教育公平。

HoloCampus reframes education. By establishing a shared holographic learning environment, it enables knowledge to transcend geographical, economic and language boundaries. Furthermore, the system also enables learners to understand knowledge through perception, close observation and action, rather than merely memorizing. At the same time, it replaces traditional harmful practices (such as animal dissection) with safe digital simulations. Moreover, those topics that have been stigmatized in real classrooms can also be taught. As a narrative prototype, HoloCampus demonstrates how future educational technology could potentially normalize inclusiveness, ecological responsibility, and critical awareness.

6. 局限与挑战 (Limitations / Challenges)Kate

要诚实指出难点，比如设备成本高、需要稳定网络、跨文化翻译可能不够精准、触觉反馈技术仍在发展。

Overall, HoloCampus may face several challenges while achieving its vision. Such as the high cost of immersive devices and the need for stable, high-speed internet, it may limit accessibility for under resources communities. Also, haptic and sensory technologies are still in early development, and they cannot deliver fully embodied experiences. Additionally, ethical concerns of privacy, digital fatigue, and emotions also demand great consideration. Such constraints aim at an inclusive, responsible, and human centred design of future educational innovations.

三节课建议

1. 古罗马建筑课（历史 / 工程）

场景：斗兽场内部，学生能“走进去”感受结构。

功能亮点：

沉浸体验：历史课不只是看 PPT，而是身临其境。

触觉反馈：学生“触摸”石材，HUD 显示材质来源、年代。

价值：让历史学习变得具体、embodied（具身化学习）。

2. Ethical Anatomy Lab（伦理解剖实验室）
代表主题：生命尊重与资源节约

不消耗真实生命，也不会让学生感到心理不适。

可 reset / rewind / slow motion，跨学科学生都能体验。

3. Inclusive Intimacy Education（包容性亲密关系课程）
代表主题：去污名化学习（Destigmatized Knowledge）

不局限于性教育，而是探索人类情感、身体、同意（consent）与心理健康。

提供安全空间、匿名模式、科学视角。

在 HoloCampus 中，这类“敏感但重要”的知识可以以沉浸、尊重、非剥削的方式呈现。

🌌 HoloCampus 的核心意义（Core Meaning）
1️⃣ 重新定义“知识的边界”——去中心化、去限制的学习宇宙
HoloCampus 的核心不是单一的课程或装置，而是一个去中心化、开放、跨文化的“知识宇宙”。
在现实教育中，学习受到物理空间、资源分配、学科分类和社会禁忌的限制；而 HoloCampus 打破了这些“知识的边界”。
在这里，来自不同国家、语言、经济背景的人都能进入同一个虚拟课堂——无论是贫民窟里的孩子、被战争困住的学生，还是渴望学习却无处可学的成年人。

它象征着“教育的重新分配（redistribution of learning）”，让知识成为一种全球共享的公共体验。

2️⃣ 让被压抑、被忽视的学习重新出现——去污名化的知识（Destigmatized Knowledge）
HoloCampus 的另一个核心价值是：

“任何知识都不是无用的，只是现实条件让它无法被平等地学习。”

因此它特别适合承载那些传统课堂难以安全教授的内容——例如性教育、情感教育、心理健康、伦理决策。
这些课程在现实中常被视为“敏感”或“禁区”，但在 HoloCampus 中可以以科学、尊重、匿名的方式被体验与讨论。
它提供了一个安全空间，让人类面对被压抑的主题而不必感到羞耻或危险。

3️⃣ 学习是“具身的”——身体、情感与意识的整合
HoloCampus 不是把知识数字化，而是让知识重新回到身体与经验。

学生可以“走进”古罗马竞技场感受结构力学、
可以“触摸”虚拟青蛙学习生命原理、
可以“倾听”他人的情感体验以理解共情。
这种学习方式让信息不再抽象，而是通过具身化（embodied learning）形成真正的理解。

它体现了信息与人类感知、伦理与创造力之间的融合。

4️⃣信息、知识与伦理的再平衡
Kirby 的“diegetic prototype” 说的是：电影中的科技原型能让观众相信“这项技术理应存在”。
而 HoloCampus 就是这样的叙事实验：
它不仅展示一种未来教育技术，也提出了一个伦理问题——

如果我们能学习一切，那么“该学什么”才是关键？

它把学习从“内容传递”转变为“伦理选择”：
如何对待生命？如何尊重他人？如何修复历史？
这就是它最深层的意义——在无限知识的世界中，重新思考责任（responsibility）与人性（humanity）。

✨一句话总结（可放在作业开头或VO里）：
HoloCampus imagines an open universe of learning where knowledge is no longer constrained by access, taboo, or time—turning education into a shared, embodied, and ethically aware human experience.

1. Introduction (group member and name of the diegetic prototype). - 30s
2. How the work in the group was divided (who did what and how things were integrated and managed). - 1min
3. About creating the videos (processes of writing, preparing, and softwares and Gen AIs used and how). 1min and 30s
4. Inspirations for your diegetic prototype (ideas, movies, other technologies) 1min
5. What is your diegetic prototype (context, function, use and criticism). - 3 min

SORA PROMPTS for “HoloCampus: Education Beyond Walls”
Scene 1 – 0–10s | “The Portal of Knowledge”
Prompt:

A cinematic opening in a dark void filled with softly glowing data particles drifting like dust, forming faint neural connections and constellations labeled “History,” “Biology,” “Intimacy,” “Philosophy.” A realistic student hand in close-up reaches toward a floating holographic button that says “Enter HoloCampus.” When the hand touches it, a wave of golden-blue light expands outward, transforming the void into a glowing universe of learning. 16:9, immersive MR visual, volumetric light rays, slow dolly-in camera, calm ambient music.

🎯 Purpose: establishes the HoloCampus world — visually showing knowledge as a boundless universe.

Scene 2 – 10–25s | “Ethical Anatomy Lab”

Prompt:

First-person POV in a bright, futuristic MR classroom. A transparent 3D frog hologram floats above a table. The student hand gently pinches to zoom and peel back layers of organs with glowing outlines. The HUD interface shows buttons “Reset,” “Rewind,” “Slow Motion.” Soft ambient lab light, shallow depth of field, warm realism. Subtle heartbeat in background. 16:9, cinematic composition.

🎯 Purpose: shows embodied learning and ethical experimentation — no real animals, tactile simulation.

Scene 3 – 25–40s | “Inclusive Intimacy Education”
Prompt:

Mixed-reality classroom with diverse student avatars around a circular holographic table. Transparent HUD text floats: “Consent,” “Emotion,” “Trust,” “Communication.” Each student glows with a soft colored aura that changes hue as emotions stabilize. Lighting is warm, inclusive, and respectful, with gentle ambient piano music. Camera pans slowly around the group, showing calm facial expressions and empathetic gestures. 16:9 cinematic MR visual.

🎯 Purpose: destigmatized emotional and intimacy education — learning empathy through simulation.

Scene 4 – 40–55s | “Restore History – Roman Colosseum”
Prompt:

A cinematic wide shot inside the ancient Roman Colosseum reconstructed in mixed reality. Late afternoon sunlight pours through arches, dust motes in air. The student stands at center wearing slim AR glasses, reaching to touch the limestone wall; material glows with subtle texture feedback. HUD overlay reads “Roman Architecture – Built 70–80 AD.” Other students appear as holographic silhouettes exploring the arena. Realistic lighting, epic yet calm mood, orchestral underscore. 16:9, cinematic.

🎯 Purpose: transforms history learning into physical exploration and collective understanding.

Scene 5 – 55–60s | “Education Without Borders”
Prompt:

The student removes the AR mini projector device worn on the ear cartilage; the holographic interface flickers off. The real-world room is modest and dimly lit, sunlight streaming through a small window. The student smiles softly, a reflection of holographic light still in their eyes. Minimalist text overlay: “HoloCampus — where knowledge lives without walls.” Music resolves into a soft chime. Cinematic close-up, shallow depth of field, emotional realism, 16:9.

🎯 Purpose: emotional resolution — returns to the real world but keeps hope and meaning.
